

CDC Lab Accounts System

Quick Guide - Operator (Reception)

This is everything you need for the daily routine. You record what comes in and what goes out; the system does all the adding up. You will never be asked to type a total.

Signing in

- Open the system and sign in with your email address and password. You stay signed in for 30 days, so you will rarely need to do this again on the same device.
- If you forget your password, use Forgot Password on the sign-in screen. After 10 wrong attempts the account locks itself for 15 minutes - wait, then try again.

Daily Expenses

- Add Expense, then enter the amount and choose the item from the list. If the item is not listed, choose Other and type a description.
- Funding Source is Business unless a partner paid for it personally - in that case choose Partner and name them. Ask if you are unsure; it changes how the figure is counted.
- The date defaults to today. Change it if you are entering something from an earlier day.

Party Income - the daily grid

- The grid has one column per daily-billing Party and one row per day of the month, exactly like the workbook.
- Type the amount in a cell and press Enter or Tab; it saves on its own. The arrow keys move between cells, so the whole grid works from the keyboard without touching the mouse.
- To remove a figure you entered by mistake, clear the cell. You will be asked to confirm, and it will name the Party and the date so you can be sure it is the right one.

Direct Cash Receipts

- When a Party pays cash outside normal billing, use Record Cash Receipt on the Party Income screen. Do not type it into a grid cell - a cash receipt is recorded separately so the monthly total stays correct.

Counter Income

- Record walk-in patient income here, separately from Party income.
- If you record a second amount for a day that already has one, the system points it out but still lets you save - sometimes there genuinely are two.

Working without internet

- You can keep working. Entries are saved on the device and upload by themselves once the connection returns. The header shows how many are still waiting.
- Do not sign out while entries are still waiting - the system will warn you. Signing back in on the same device is fine; the entries are still there.

What you will not see

- Profit, loss, partner investment, and the profit split are not shown to Operators. That is deliberate, not a fault, and not something a setting can change.
