

CDC Lab Accounts System

Quick Guide - Partner

You can do everything an Operator can, plus the monthly work and the financial results. Every figure you see is calculated live from the entries - nothing is a stored total, so it is always current.

Dashboard

- This month's income, expenses, and result, each shown next to last month's. A six-month trend chart and any warnings sit below.
- Warnings tell you when a recurring bill has no entry yet this month, or an Instalment line has not been generated.
- If entries are still waiting to upload from a device, the totals are marked provisional so you know the picture is not yet complete.

Monthly Expenses

- Administration and Purchasing are totalled separately for display and combined for the profit calculation, exactly as in the workbook.
- The daily expense total appears automatically as a read-only Purchasing line. Do not re-enter it.
- Recurring Pre-fill copies last month's recurring categories forward. It always shows you what it will create and waits for you to confirm.

Assets and Instalments

- An asset is either Instalment or Cash, never both.
- Instalment: set the monthly amount. It appears as an ordinary monthly expense and reduces profit. No partner is tagged against it.
- Cash: set the purchase price and the partner who paid. It is not an expense - it raises that partner's Partner Investment.
- Generate Instalment Lines creates this month's instalment expenses. It previews first and will not create a duplicate for a month that already has one.

Monthly Party Bills

- One figure per monthly-billing Party per month. Correcting a figure is an ordinary edit, never a second entry.

Partner Investment

- A running cumulative total per partner: capital put in, cash-purchased assets, and any expense a partner funded personally.
- Partner-funded costs are never repaid in cash - they raise the investment total instead. They also still appear in the expense listings by category, so spending never disappears from view.
- Investment never affects the profit split.

Monthly Summary and reports

- Defaults to the current month; step months or set any custom date range. There is no month closing - every record stays editable, and the Change History records who changed what.
- Export the summary as a PDF laid out like the existing sheet, or the underlying entries to Excel. Every export shows the date produced, the range covered, and who produced it.

Change History

- Every addition, edit, and archiving is recorded with who did it and when, including entries made offline. Filter by user, date, or record type, or open one record's own history from its History button.
- Nothing is ever deleted. Archive removes a record from the lists and keeps its history intact.
